MANAGEMENT

We are a full service group providing process development, engineering, procurement, construction and maintenance management expertise for the process industry. We provide single point responsibility in performing engineering, procurement, and construction (EPC) for projects.

Design Engineering- PPC provides a full compliment of design

During design, potential problems can be identified and solved before they surface in the field.

PPC acts to provide conformance with program goals.

PPC can assist by planning a project, validating the scope of work and budget, establishing a schedule control process and providing constructability design reviews.

Project Size

- We are capable of performing EPC services on projects of small and medium size up to \$10 million.
- Construction management was completed on a \$150 million project supervising approximately 700,000 manhours in 9 months.
- PPC completed the process design, equipment selection and specification on a \$300 million project including all environmental requirements.

Most of PPC's business has been repeat business; our mission statement, our philosophy is to give the client what they want at a reasonable price.

Design Engineering

PPC has in house capability to perform detail engineering for small to mid-sized projects.

PPC has an experienced design team which has been working together for many years. This team has the experience and the mindset to design for operability, constructability and economy. PPC provides a full compliment of design
